

TEEB FOR AGRICULTURE & FOOD

'SCIENTIFIC AND ECONOMIC FOUNDATIONS' REPORT FIRST WRITER'S WORKSHOP

Chapter 8 – Using the framework: challenges and examples

Harpinder Sandhu

Harpinder.Sandhu@flinders.edu.au

Chapter 8 – Some thoughts

- Introduction:
 - brief contextual grounding with the rest of the report,
 - Linkages with previous chapters, 5,6,7
 - Set vs menu
 - transparent system
 - no cherry picking
- Commentary/Narrative on evolving nature of the framework:
 - current data/need vs future needs
 - opportunities to add on to various cells
 - adding spatial and temporal context

- Key questions that this chapter seeks to answer
 - How this framework is applied OR can be applied?
 - Process and steps OR its application - drawing from existing literature as well as TEEB AgFood feeder studies and new pilot studies.
 - To establish benchmarks for the industry.
 - Situations where it cannot be applied.
 - Showcase some examples from – Production, Distribution or Consumption side. Case studies from both developed and developing world. May not have one single example which covers all columns/rows.
 - How this framework can be used for comparison of policy scenarios?
 - To address policy outcomes at farm, business, government level - comparison of different management systems, policy scenario A (Input Subsidies) vs B (Incentives), different food plates, national accounting etc.
 - Matrix of Examples/Value chain/spatial context. (TABLE)

Examples/Value chain/spatial context

Examples (Research/Practice)	Production	Processing/Distribution	Consumption
Local			
National			
Regional			
Global			

- What are the key challenges of this framework?
 - data gaps
 - Need to redefine research priority
- What are the caveats in applying framework?
 - Risks and uncertainties in application
 - depends on the audience
 - Utility of framework in absence of any regulatory framework that penalize wrong practices and incentivise the right ones.
 - What are the financial investment opportunities if this framework is used
- Key messages and conclusions
